J. Biochem. 162:501-507(1987).

CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.

PATHWAY: Second phase of glycolysis; first step.

SUBCELLULAR LOCATION: Cytoplasmic.

SIMILARITY: Belongs to the glyceraldehyde 3-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            dehydrogenase family.

The method comprises transforming a comprising the glucan in a plant. The method comprises transforming a comprising the vector, growing the plant and inducing expression of the colymnoleotide for a time sufficient to produce the glucan in the colymnoleotide for a time sufficient to produce the glucan in the colymnoleotide protein to voluce a transfer clant, and clucan colymnians at transfer clant, and clucan composition comprises transformed comprises transformed comprises transformed comprises transformed comprises transformed comprises transformed comprises 
                                                                                                                                                                                                                                                                                                                                                                                                        밁

Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 21-25; 44pp; English

```

Glucosyltransferase B or D protein useful for producing a glucan as substitutes for and additions to modified starch and latexes i paper manufacture, comprises mutations in specific positions ä useful

Claim 36; Page -; 44pp; English.

CC (GTF) B polypeptide having changes at position from 1448V, D457N, CC D567T, K1014T, J458N/D557T, D457N/D57TK, D567T/D57TK/K1014T, J458N/D557T, D457N/D57TK, D567T/D57TK/K1014T, J458N/D557T, D457N/D57TK, D567T/D57TK/K1014T, J458N/D557T, D457N/D57TK, D567T/D57TK/K1014T, J458N/D557T, D457N/D57TK, D567T/D57TK, CC D567T/D57TK/K1014T, J468V/D457N/D573N/D567T/D57TK, D567T/D57TK, CC D47N/T107N/T11A, and K779Q or a GTF D polypeptide having CC changes at positions from T89D, T89BE, M471D, N471D/T58D, and CA M71D/T58D. Also included are a glucan produced by the GTF mutant, CC an isolated polynuclectide which encodes P1 or P2, or its complementary CC polynuclectide, a ribonucleic acid sequence encoding the GTF mutant, CC an isolated polynuclectide which encodes P1 or P2, or its complementary CC polynuclectide, a ribonucleic acid sequence encoding the GTF mutant, CC an isolated polynuclectide with encoders plant, a paper sizing and/or vector, a seed or tuber from the transgenic plant, comprising the produced in a plant transformed continuous produced in the amyloplast and/or vector a latex, thermoplastic molecule or their combinations or glucan and starch historynthesis, transformed with a gene encoding a glucosynthesis, transformed with a gene encoding a cc plant starch biosynthesis, transformed with a gene encoding a cc plucosyltransferase B or D enzyme, wild-type or mutant and a paper cc thermoplasting the glucan in a plant. The method comprises transforming a plant real under plant glucan produce a plant cell under plant growing complexing the plucan in the plant cell under plant growing complexing and plucan in the plant cell under plant growing complexing the glucan produce the plant cell under plant growing complexing the glucan produce the plant and inducing expression of the polymuclectide for a time sufficient to produce a transgenic plant, and glucan comprises the plant produce a transgenic plant, and glucan produced plant and additions to modified starch discount in the present sequence in paper manufacture. information 'n claim

thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line combination or glucoses and the glucan is produced in the amyloplast and/or vacuole or a maize line comprises that in starch biosynthesis, transformed with a gene encoding a comprise glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a complication to produce a regenerated plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the cribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transit sequence from is produced in the amyloplast of potato or the vacuole of sugar beet. Clucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper commentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.

Cunte: The present sequence is not shown in the specification but composition in claim 36.

Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic environmentally friendly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           D567T/D571K/K1014T, 1448V/D457N/D567T/D571K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypoptide having changes at positions from T589D, T589E, N471D, N471D/T589B, and N471D/T589E. Also included are a glucan produced by the GTF mutant, N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polymucleotide which encodes P1 or P2, or its complementary polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polymucleotide operably linked to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   promoter, a vector comprising the expression cassette, host of introduced with the vector, a transgenic plant comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 36; Page -;

CC (GTF) B polypeptide having changes at position from 1448V, D457N, CC D567T, X1014T, D457N/D565T, D457N/D571K, D567T/D571K, CC D567T/D571K/K1014T, 1448V/D457N/D567T/D571K/X70A/Y170A/Y171A, and K779Q or a GTF D polypeptide having CX 169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having CX 169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having CX changes at positions from T589D. T589E, M471D, M471D/T599D, and CX M471D/T599E. Also included are a glucan produced by the GTF mutant, CX polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CX polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CX polymucleotide, a ribonucleic acid sequence encoding the GTF mutant, CX polymucleotide with the vector, a transgenic plant comprising the polymucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell conditions of their combinations or plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed control of the modern or their combinations or glucan and starch where CX elicitent in starch biosynchesis, transformed with a gene encoding a glucan in a plant. The vector is useful deficient in starch biosynchesis, transformed with a gene encoding a CX plant cyll with the vector, growing the plant cyll under plant growing a CX plant cyll where a regenerated plant and inducing expression of the regenerated plant, where the vector contains a transit sequence from the plant and glucan sample the awayloplast of potato or the vacuole of sugar beet. CX plant produced in the awayloplast of potato or the vacuole of sugar beet. CX plant produced in the awayloplast of potato or the vacuole of sugar beet. CX plant produced in plant and glucan cX plant and glucan cX plant produced by produced by the plant and glucan cX plant produced by plant and plant and glucan cX plant plant a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               07-JUN-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, composition is produced in the amyloplast and/or vacuole or a maize line conditions is produced in the amyloplast and/or vacuole or a maize line comprising the glucan in a plant transformed with a gene encoding a comprising the glucan in a plant. The method comprises transforming a comprising the plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transforming a conditions to produce a regenerated plant and inducing expression of the regenerated plant, where the vector contains a transit sequence from continuous biphosphate carboxylase small subunit, waxy, brittle-1 and conditions to produced in the amyloplast of potato or the vacuole of sugar beet. Clucans are useful as substitutes for and additions to modified starch candificative input materials that produce chemical effluents, paper manufacture. Unlike prior art techniques, which require input materials that produce day GTF, which utilises biologically produced input materials, is more cost-effective and convolutions to modified starch consideration the present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
